Application for the Position of Backend Engineer

Dear Hiring Team at Similarweb,

I am writing to apply for the Backend Engineer (Web Scraping & Data Extraction Specialist) position at Similarweb. With over two years of experience as a Software Developer and a background in data science, I believe I can bring value to your team.

In my current role at Bertschi, I design and maintain software systems using technologies like PHP, SQL, and Docker. I've also worked on automating data analysis processes and building APIs, which has helped improve efficiency and system integration. My experience with containerization and DevOps practices would be a good fit for this role.

In addition to my work experience, I am studying Data Science part-time at FHNW. My studies have focused on machine learning, data wrangling, mathematics, statistics, and web scraping. I've also worked with Java and Python on various projects, including building a web scraper to monitor product price changes. This hands-on experience aligns well with the responsibilities of the position.

What draws me to Similarweb is your focus on digital intelligence and the opportunity to work with a talented global team. I'm particularly excited about the chance to contribute to projects that help businesses make data-driven decisions.

I would love to bring my skills and enthusiasm to your team and help improve your web scraping and data infrastructure. Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute.

Sincerely,

Benjamin Würmli
